

Cheltenham Heliport is made for CIX VFR Club (<https://www.cixvfrclub.org.uk/index.php>)
by *Flight Sim Flyer*
(<https://www.youtube.com/channel/UCBEnMjXTTSdMPMm-SaXDfYw/videos>)

Version 2.0:

The four main helipads are placed in the same positions as the current XPlane scenery. This is to prevent conflicts with pilots who have not downloaded CIX scenery. NATS document four pads (three 18m, one 13m) but do not offer coordinates or a chart. CIX VFR club require four main pads and four additional (not real-world) pads for their annual event.

I have added two windsocks abeam the rwy14 threshold as per XPlane scenery and also added some low-level ground lighting to facilitate night-operations. In the real-world, there are ground lights near the main pads and the FATO is edged with green lights. I am unable to make bespoke lights for the FATO so I have used Asobo runway lights.

Some vehicles have been used from other scenery packs. It is not essential, but if you would like them to be visible, you must download and install these scenery addons:
